

Facts for Principals

NAEP IS AN INTEGRAL PART OF EDUCATION IN THE UNITED STATES.

- ▶ Elected officials, policymakers, and educators all use NAEP resources and results to develop ways to improve education.
- ▶ NAEP provides a common measure of student achievement across the country.
- ▶ NAEP is a congressionally mandated project administered by the National Center for Education Statistics, within the U.S. Department of Education and the Institute of Education Sciences.
- ▶ Depending on the type of NAEP assessment that is administered, the data can be used to compare and understand the performance of demographic groups within your state, the nation, other states, and participating urban districts.
- ▶ Teachers can use sample NAEP questions, scoring guides, and performance data as a resource for understanding student achievement.

“NAEP has excellent resources for both novice and veteran teachers. The NAEP Questions Tool, for example, offers teachers a database of over 2,000 high-quality questions they can use to measure performance and needs of students in their classrooms.”

– Dr. William A. Milledge, Jr., Principal, Fitzpatrick Elementary School, Montgomery, AL

The National Assessment of Educational Progress (NAEP) is the largest nationally representative assessment of what our nation’s students know and can do in subjects such as civics, geography, mathematics, reading, science, technology and engineering literacy, U.S. history, and writing. The results of NAEP are released as The Nation’s Report Card.

As principals, you are essential partners in NAEP. You make an important contribution by selecting and empowering a NAEP school coordinator, meeting with teachers and students who will participate in the assessment, and encouraging your students to participate and do their best. When students take part in NAEP and give their best effort, we get the most accurate measure possible of student achievement across the country. The table below shows which subjects will be assessed in 2014. Information collected from pilots is used to prepare for future NAEP assessments.

The NAEP 2014 Program			
Grade	Subjects	National Results	Assessment Window
Grade 4	Science (Pilot)*		January 27 - March 7, 2014
Grade 8	Civics	✓	January 27 - March 7, 2014
	Geography	✓	
	Technology and Engineering Literacy	✓	
	U.S. History	✓	
Grade 12	Science (Pilot)*		January 27 - March 7, 2014

* Results will not be available for the science pilot.

It's important to know that...

NAEP was first administered in 1969 to measure student achievement nationally. Since the 1970s, long-term trend assessments have been administered to 9-, 13-, and 17-year-olds and are currently conducted every 4 years to gauge students' progress in mathematics and reading. In 1990, NAEP was administered at the state level for the first time. Students in grades 4 and 8 are currently assessed at the national and state levels in mathematics and reading every 2 years and in other subjects in alternating years. Grade 12 students are assessed in a variety of subjects and results are typically released at the national level.

In 2014, the technology and engineering literacy (TEL) assessment will be operational for the first time. In addition to civics, geography, U.S. history, and the science pilot, the TEL assessment will also be conducted at grade 8 on computers provided by NAEP representatives. TEL measures students' capacity to use, understand, and evaluate technology, as well as to understand technological principles and strategies needed to develop solutions and achieve goals. To learn more about TEL, watch the overview video at <http://nces.ed.gov/nationsreportcard/videos/telanimation>.

Pilots and other special studies are also conducted periodically. In 2014, students may be selected to participate in national science pilots. They will be administered in three formats: the traditional paper-and-pencil assessment, hands-on tasks (HOTs), and interactive computer tasks (ICTs). HOTs provide students an opportunity to demonstrate how well they are able to plan and conduct scientific investigations, reason through complex problems, and apply their knowledge in real-world contexts. ICTs ask students to solve problems in a computer-based environment, often by simulating a natural or laboratory setting. The complete library of released science HOTs and ICTs may be accessed at http://nationsreportcard.gov/science_2009/ict_tasks.aspx.

NAEP is considered the gold standard of assessments because of its high technical quality. From the development of frameworks and questions to the reporting of results, NAEP represents the best thinking of assessment and content specialists, state education staff, and teachers from around the nation. NAEP is a

trusted resource that not only measures student progress, but also helps to inform policy decisions for improving education in the United States.

NAEP reports on results for different demographic groups rather than for individual students or schools. NAEP uses a carefully designed sampling process to ensure that the schools and students selected are representative of those schools and students across the United States. To ensure that the sample represents all students in the nation's schools, NAEP allows a broad range of accommodations for students with disabilities and English language learners.

NAEP is designed to cause minimal disruption of classroom instruction. It takes approximately 90 to 120 minutes for students to complete NAEP assessment activities. Students are assessed in only one subject area. They are also asked to complete the student questionnaire, which provides contextual information, such as the amount of reading students do and what types of classes they take. Teachers do not need to prepare their students to take the assessment but should encourage them to do their best. NAEP representatives provide significant support to participating schools and work with your designated school coordinator to organize assessment activities. NAEP representatives will bring all necessary materials and administer the assessment.

NAEP items can be used as a helpful educational resource in the classroom. Teachers can use the NAEP Questions Tool at <http://nces.ed.gov/nationsreportcard/itmrlsx> to see how students' performance compares nationally on specific items. Released NAEP items come with a scoring guide, sample student responses, and performance data.

School staff can also

- ▶ view results for the nation over time,
- ▶ compare results for various demographic groups, and
- ▶ access information designed for teachers, students, and parents.
