

A Special Spider

The wolf spider is a special spider. It does not build	11
a web. It hunts for food like a wolf hunts. It walks	23
around on the ground looking for food.	30
Most spiders lay their eggs on their web. The wolf	40
spider mother carries her eggs with her. Many baby	49
spiders hatch from the eggs. The babies are called spider	58
lings.	59
The mother cares for her spider lings in an unusual	68
way. She carries them on her back. Soon the little ones	79
will be free to go out on their own.	88
