

Health I

Strand 6: Human Development

Notice: In utilizing the Core Guides be aware that all hyper-links are meant as separate resources and not as approval or alignment to an entire website's domain.

Human Development (HD) teaches students how their body changes throughout their lifespan, how to care for and protect their bodies in a way that is developmentally and age appropriate, and characteristics of a healthy relationship. Students will learn medically accurate and unbiased facts about human reproduction, anatomy, physiology and disease prevention. Students will also recognize characteristics of healthy relationships.

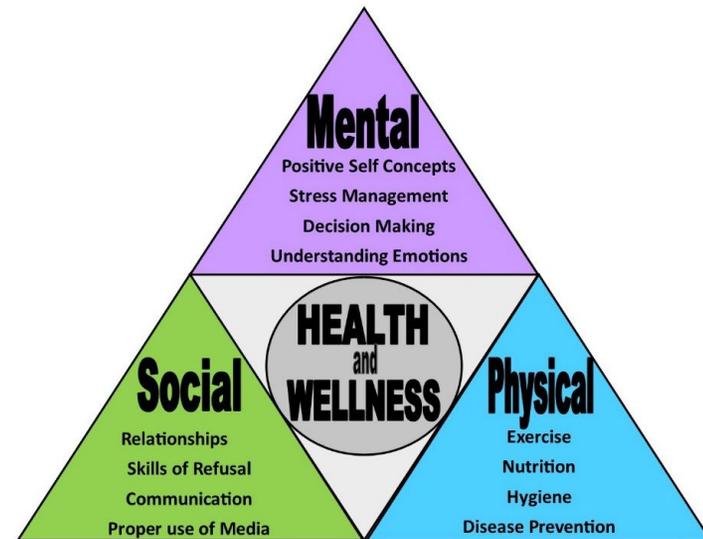

Goal: Students will understand reproductive anatomy and physiology, pregnancy, disease prevention, healthy relationships, and refusal skills. Utah Code requires parental notification for instruction on child sexual abuse prevention and parental consent for instruction on sex education. Instruction shall stress the benefit of abstinence before marriage and fidelity after marriage.

[State Health Education Web page](#) with Parental Consent Form and required Law & Policy training

All standards in this strand require parental consent

All curriculum, materials, media, and guest speakers need to be approved through local committee

See [Utah Code 53G-10-402](#) or contact Jodi Parker for more information or training: jodi.parker@schools.utah.gov

The academic success of Utah's students is strongly linked to their health. The goal of Health Education is to support parents and families in developing healthy, responsible students who have the knowledge, skills, and dispositions to work together in an inclusive manner to think critically and participate in a variety of activities that lead to lifelong healthy behaviors. The inclusion of health in a student's education positively contributes to their ability to learn, focus, and achieve health and wellness throughout their lives. The Utah Core Standards for Health Education focus on overall health which includes physical, mental, emotional, and social health in each of the six strands.

The Health Triangle is a tool to show how the three elements of health are interconnected and need to be balanced to achieve overall health and wellness. The image has some examples of mental, physical, and social health. The Health Education Core Standards are designed to incorporate each area of the triangle within each strand.

Health I – Strand 6 Human Development

Standard	Possible Activities	Past, Related, and Future Standards
<p>Standard HI.HD.1: Describe the physical, social, cognitive, and emotional changes of adolescence and recognize the individual differences in growth and development, physical appearance, self-identity, and attraction.</p>	<ul style="list-style-type: none"> • Identify and compare changes occurring to teenagers physically, cognitively, emotionally, & socially. • Growth & development charts and explain the genetic influence involved. • List changes that occur during puberty with relationships, abilities, emotions, and responses. 	<p>Past: Standard 5.HD.1, 3, & 4</p> <p>Future: Standard HII.HD.1</p>
