

## Architects Design

People live in homes. They shop in malls. They	9
work in offices. Who designs these places? Architects	17
do!	18
Architects come up with ideas to build things.	26
They talk to the person who hires them. They find out	37
what needs to be built.	42
Architects think of a good design. They make	50
sure the building is safe. They want it to look nice too.	62
Architects draw sketches. They also build models.	69
That helps architects share their ideas. Now other	77
people can see what the building will look like.	86
