

Nontraditional Career Brochures Activity #8 – Flow Chart

Objectives:

1. Students will explore the idea of pursuing a nontraditional career.
2. Students will be introduction/review the CTE Pathway Chart.

Time: 45-50

Materials:

Background for Teacher:

Pathways are programs of study in the CTE areas that help students make a connection with their future career goals and interests. They help guide students to gain information about careers, education requirements and training opportunities. As student understand their interests and career directions they can take required courses and electives while in high school and plan for post high school training and education. They also promote skill development in academics and real-world problem solving.

Teachers use Pathways to educate students about their future opportunities. Pathways help students see what programs are available and encourage them in the direction of their career goals.

Pathway chart and training

Student Prior Knowledge: Students should have information about the CTE Pathways and how they help guide them in their high school course choices as well as direction for post high school opportunities.

Intended Learning Outcomes: Students will identify nontraditional careers that they are interested in learning more about. Students will use the nontraditional careers brochures to gain more information about these careers.

Instruction Procedures: Students will create a flow chart showing which classes they will take to lead them through their preparation and course work toward the career of their choice. Encourage students to use the 31 NT Pathway brochures for this information. The chart of NT #2 could be helpful in the initial planning.

Assessment: Completion of the flow chart.
